

Choosing the Right Lift

Many people feel that because they have an odd shaped stairway, or they live in a split level home, that a stair lift is out of the question. By looking at all the different stairway configurations below, you'll be able to see that there is a lift designed to meet almost any type of stairway. One issue to keep in mind is that sometimes it's not the layout of the stairs that causes the difficulty – it's the width. As a standard, your stairway should be 32" or wider to accommodate a stair lift. For more information on Stairlifts, contact us at info@awalifts.com or call 1-800-725-4387.
